

1) Python scripts (files) have names that end with:

- ☐ .py
- ☐ .doc
- ☐ .ipynb
- ☐ .exe

2) Which of the parts of a computer actually executes the program instructions?

- ☐ Central Processing Unit
- ☐ Main Memory
- ☐ Input Devices
- ☐ Output Devices

3) What is "code" in the context of this course?

- ☐ A sequence of instructions in a programming language
- ☐ An special way to encrpyt data and information

- ☐ A password we use to unlock Python features
- ☐ A set of rules that govern the style of programs

4) A USB memory stick is an example of which of the following components of computer architecture?

- ☐ Input Device
- ☐ Main Memory
- ☐ Secondary Memory
- ☐ Central Processing Unit

5) Where can CPU get the code?

- ☐ Main Memory
- ☐ Hard Drive
- ☐ Keyboard
- ☐ Internet

6) Why we use the secondary memory?

- Secondary memory is large enough
- Main memory is expensive
- Secondary memory is faster
- Secondary memory can store data forever

7) 请用Python 编译一段程序，在输出端显示 “Hello World! My name is (your name)! ”
